What will you learn?

- What goes into ranking high on Google and other search engines
- Common SEO myths that no longer work
- Strategies for getting your organization started with SEO

What is SEO?

The practice of optimizing your website so it shows at the top of organic search engine result pages (SERPs).

The end goal is an increase in the amount and quality of traffic to your website.

How Fast Does SEO Work?

SEO is a long-term growth strategy that will require patience.

If you need to drive traffic to a page quickly, utilize PPC or other marketing techniques.

Why SEO for Your Business?

- Organic results typically more trusted than ads
- Long-term growth strategy, builds on itself over time
- “Free” traffic to your website, can result in leads

What Makes Good SEO?

SEO Myth #1

Great SEO is all about knowing where to place keywords.

The Truth

Great SEO is mostly about
creating great content.

First, remember when it comes to SEO
Google is just trying to serve up the
best content to its searchers.

How this is done can be summed up in
four basic element.

The Four Elements of SEO

Relevancy

Are your pages relevant to your target keywords?

Crawlability

Is it easy for search engine crawlers to understand your website?

Engagement

Do searchers stay on your pages? Are your search listings clicked often?

Authority

Do other sites link to you? How about high-authority sites?

Internal Optimization

External Optimization

Your SEO goal, at the simplest level, is to make great content for your audience and make it easy for Google to find it...

Relevancy

SEO Myth #2

You can make a website rank high on Google with great SEO.

The Truth

Websites don't rank high on
Google... pages do.

What does this mean?

The best way to grow targeted traffic to a website is by focusing on individual pages that are targeted toward a specific keyword/search term.

This means you need to conduct **keyword research** to really succeed at SEO.

Targeting Keywords

Relevancy

Is the keyword related to your business goals?

Difficulty

Is the keyword easy enough to rank for?

Volume

Are there enough searches for it to be worth it?

To choose the perfect keyword for SEO all three answers should be yes.

Keyword Research Tools

- UberSuggest (*Freemium*)
- SEMRush (*Premium*)
- Google Keyword Planner (*Required Google Ads Account*)

SEO ANALYZER

Backlinks ^{NEW!}

Search bar containing the text "drones". On the right side of the bar, there is a language selector set to "English / United States" and a "Search" button.

Keyword Overview: drones

SEARCH VOLUME [🔊]
301,000 HIG+

SEO DIFFICULTY [🔊]
90 HARD

PAID DIFFICULTY [🔊]
100 HARD

COST PER CLICK (CPC) [🔊]
\$0.71

This keyword is **hard** to rank for. There is a **10% chance** you can rank in the top 20.

Now What?

Now that you have a few keywords ready to target, what do you do with them?

In an ideal world, you'll already have a post or page that has content on the keyword you're targeting, and you can optimize an existing page.

But often, you'll need to create brand new content.

Dos & Don'ts of Relevancy

DO

- Ensure your target keyword is included in the title of your page
- Link to the page you created using your target keyword as anchor text throughout your website
- Write unique content
- Create a page that is the best resource on the target keyword you're targeting

DON'T

- Bait and switch content – make sure your page is about the target keyword
- Create several different pages for the same target keyword
- Steal content from other sources – keep it original
- Create pages with thin content that add little to no value to potential readers

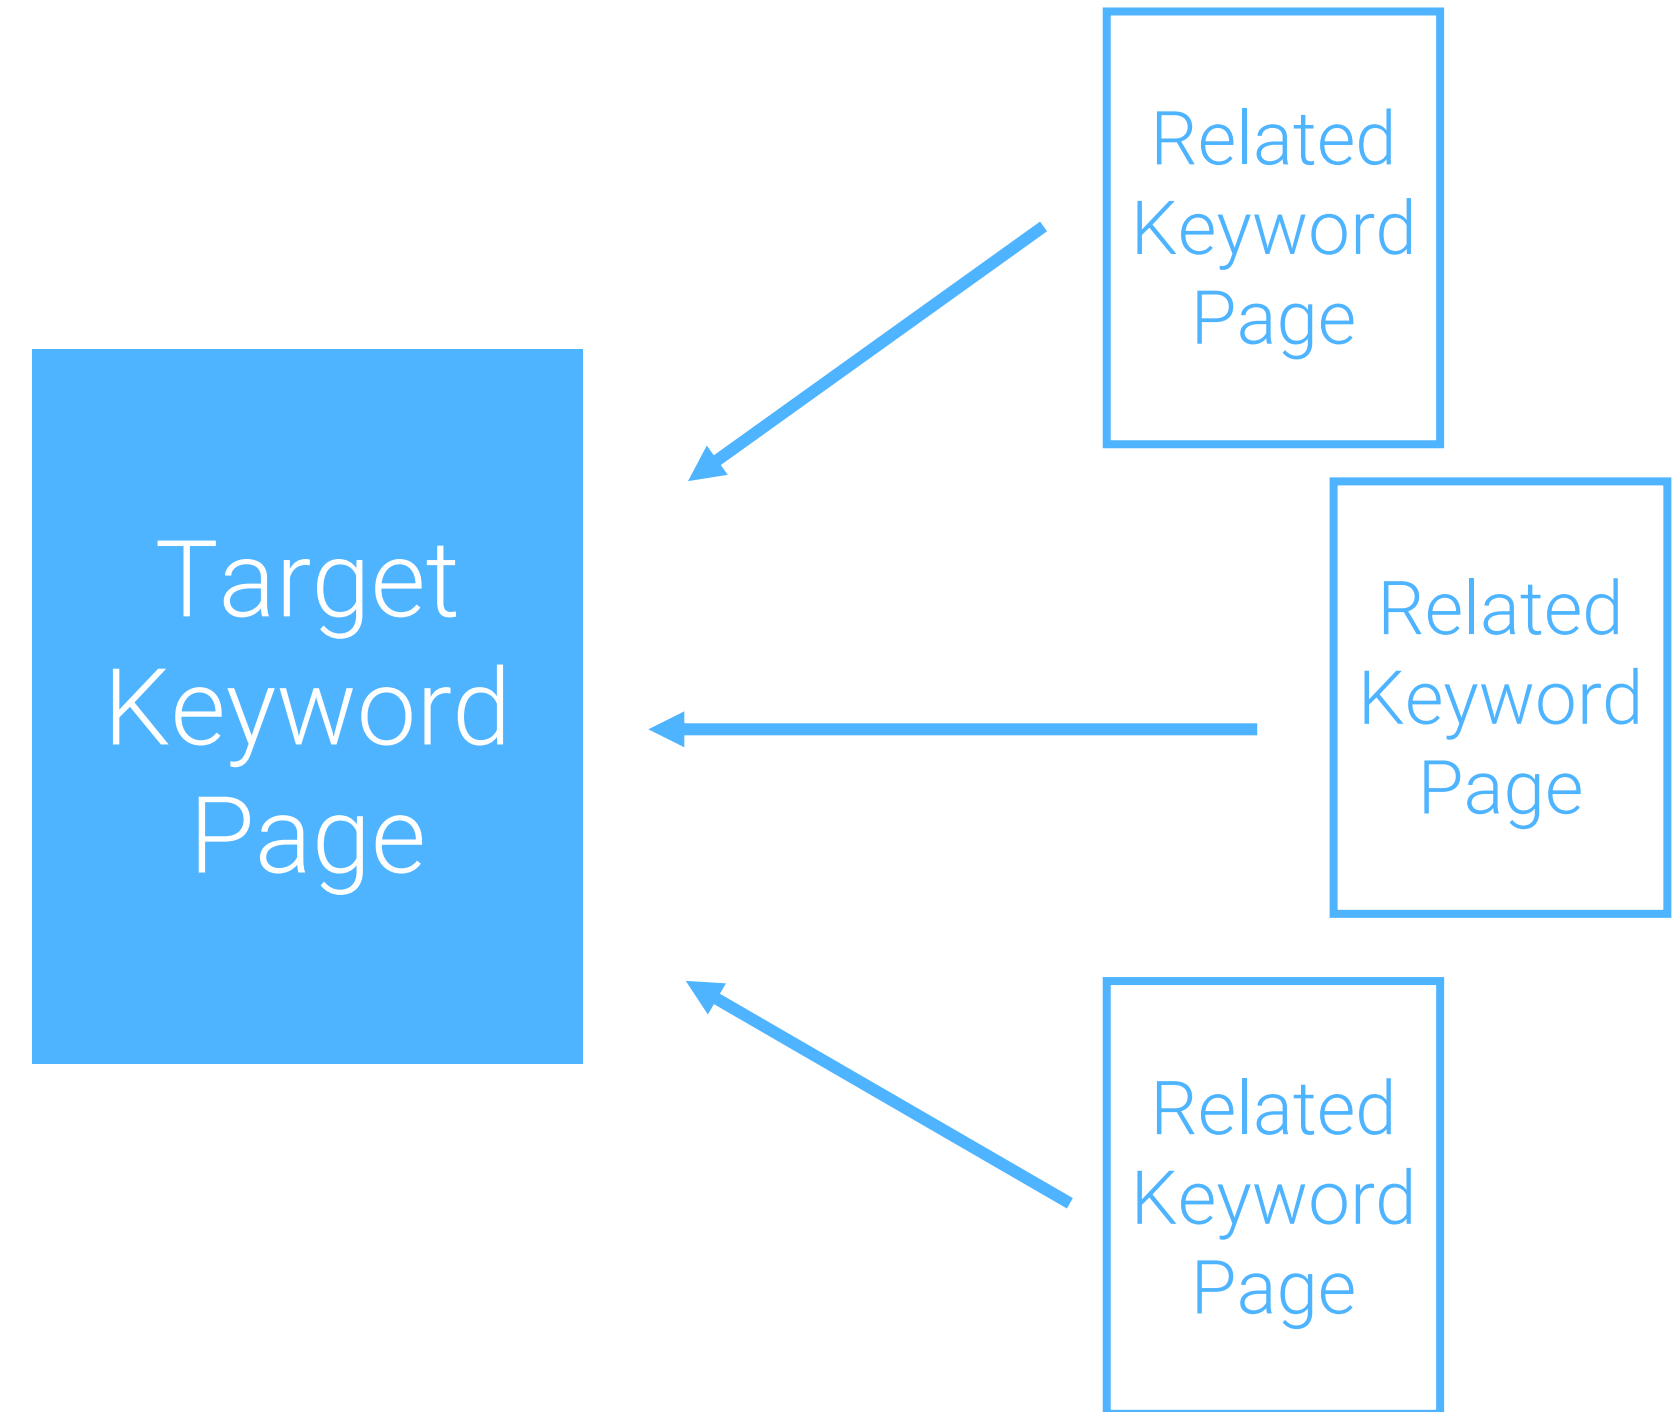

Making More Relevant Content

- Tools like UberSuggest, LSIGraph, BuzzSumo will give you ideas on what people are searching for and what types of content is already popular
- Make your content include answers to common questions and queries related to your target keyword
- Create pages related to your keyword (but be careful not to cannibalize your target keyword)

Create one-way links back to the page you're trying to rank for on Google.

Use your target keyword in the anchor text of these pages.

This reinforces to Google that this is the page on your website to go to for this search term.

Crawlability

What is Crawlability?

This is the aspect of search engine optimization that most people think of when they think of “SEO.”

- Putting your keywords in the right spot
- Making sure it's easy for Google to 'read' or 'crawl' your website

This can get technical – but we're going to stick to the basics...

Where to Use Target Keyword

- Mention Keyword One time each in:

- **Title**
- **Headline (Bounce Rate)**
- **Meta Description (more on this later)**
- Image alt tag
- URL
- Subheaders
- Image Names

All pages on your site should do at least this

Most pages on your site should do this

- Two-Three times in content

[[Which Wines Are The Best For Your Health? And Why? | Wine Folly](#)

Writing a Great Title/Header

[Which Wines Are The Best For Your Health? And Why? | Wine Folly

[<https://winefolly.com> › Blog ▼

[Mar 18, 2019 - Evidence also suggests that younger **red wines** are better than older wines when it comes to **health**. Find out which **red wines** are the **best** for ...

- Aim for 50-60 Characters. 65-character max.
- Include Your Target Keyword
- Generate Curiosity
- Use Emotional Words (Amazing, Sensational, Daring, Simple, Alarming)
- Use Action Words (Learn, How to, Boost, Impact, Reduce)
- Use Numbers (1-10) – i.e. 5 Steps to Getting the Perfect Drone Shot

After you do these things, try running your headline through an analyzer for additional ways to improve.

Always make sure the target keyword is in the headline though.

<https://coschedule.com/headline-analyzer>

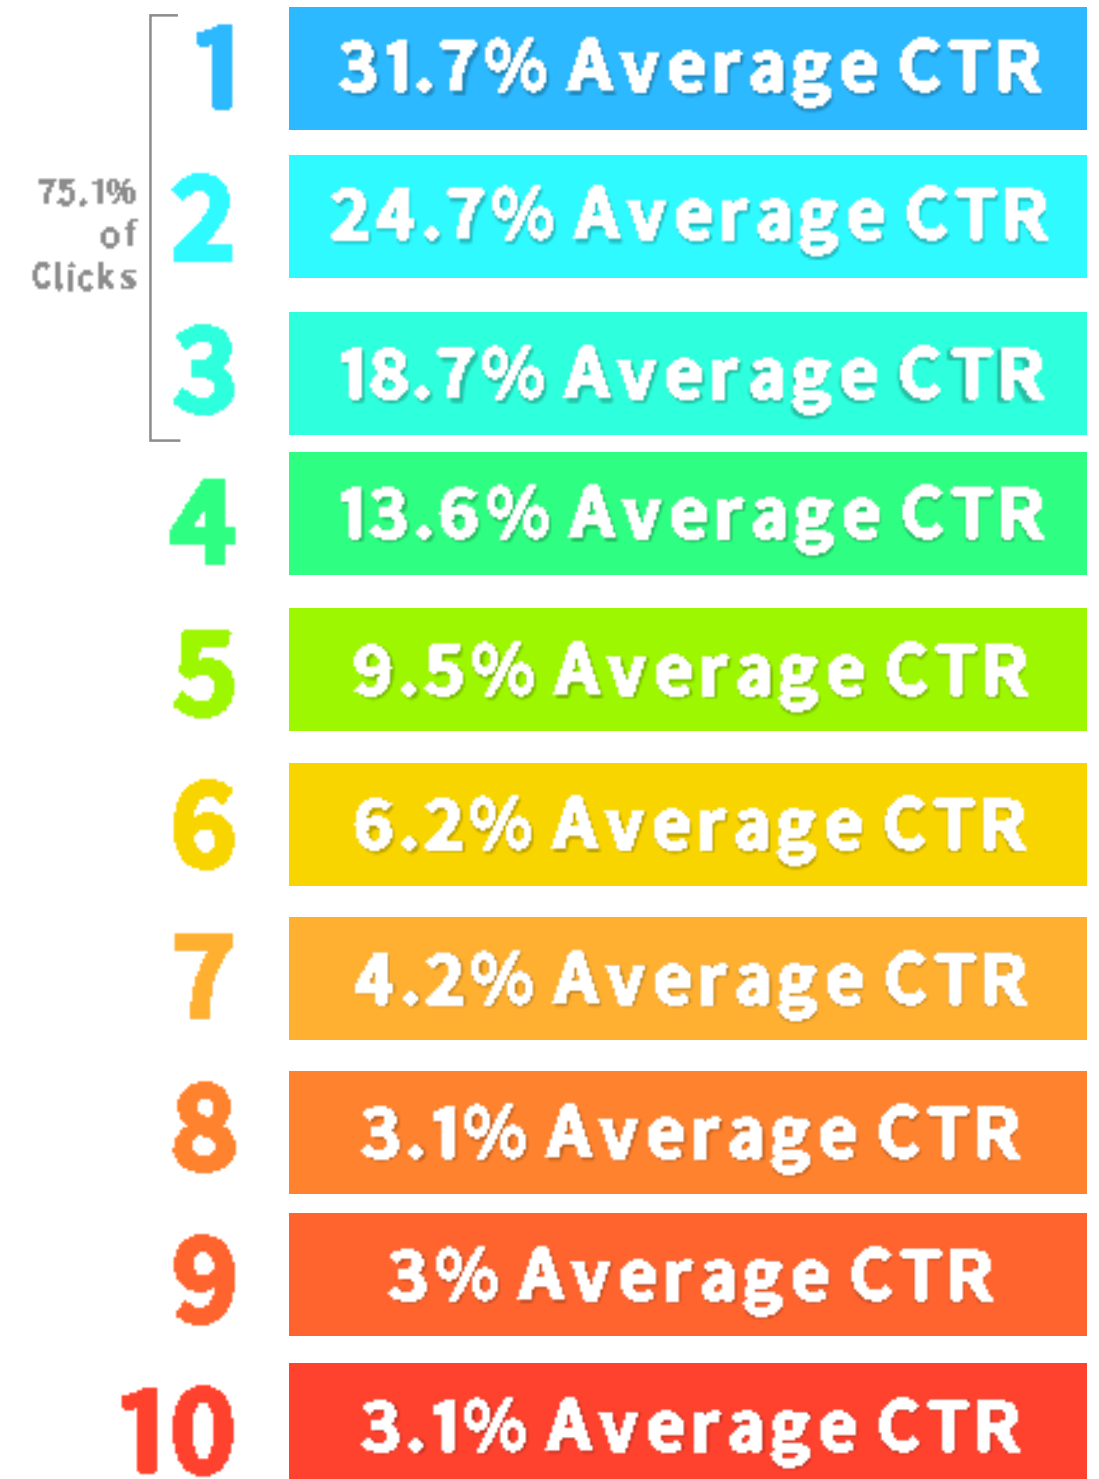

Meta Descriptions

Meta description written as "ad copy"

- Meta descriptions don't directly affect SEO
- Mini-ads to searchers enticing them to go to your website
- Aim for 150-160 characters
- Include your target keyword – it will be bolded if searched for
- If your CTR is higher than average for that search term it is a positive signal to Google

Google

Source: backlinko.com/google-ctr-stats

Okay:``

This alt text is only "okay" because it's not very descriptive. Yes, this is an image of a stack of pancakes. But, there's more to be said about this image.

Good:

``

This alt text is a better alternative because it is far more descriptive of what's in the image.

Not recommended:

``

or

``

- Source: Moz.com

Alt Text Guidelines

Do

- Do describe the image as specifically as possible
- Use your target keyword (*if it makes sense to do so*)
- Name image file names descriptively
- Compress images to small as possible file size

DON'T

- Don't leave alt text empty or with vague descriptions.
- Keyword stuff in an attempt to rank for an image
- Don't include 'image of' or 'picture of' – this is unnecessary
- Avoid Using CSS background images for Informational Images

Size Down Your Images

https://tinypng.com

HOME PHOTOSHOP DEVELOPER API THIRD-PARTY ANALYZER LOGIN

Drop your .png or .jpg files here!
Up to 20 images, max 5 MB each.

Like to compress more? [Go Pro!](#)

Smart PNG and JPEG compression

More than 1 billion PNG and JPEG images optimized and still counting!

What does TinyPNG do?
TinyPNG uses smart lossy compression techniques to **reduce the file size** of your PNG files. By selectively decreasing the number of colors in the image, fewer bytes are required to store the data. The effect is nearly invisible but it makes a very large difference in file size!

Why should I use TinyPNG?
PNG is useful because it's the only widely supported format that can store partially **transparent images**. The format uses compression, but the files can still be large. Use TinyPNG to shrink images for your apps and sites. It will use less bandwidth and **load faster**.

Get the Web Interface Pro!
Drag & drop **more than 20 files** at once and have the 5 MB size limit **removed!**

Can anyone tell the difference?
Panda says: Excellent question! Let me give you a side by side comparison. Below are two photos of my cousin. The left image is saved as 24-bit PNG directly from Adobe Photoshop. On the right is the same image processed by TinyPNG. **Spot any difference?**

Original transparent PNG
File size **57 KB**

Shrunk transparent PNG
File size **15 KB**

Buy & Sell Source Code
Buy & sell source code with PieceX, the best AI powered source code marketplace.
ADS VIA CARBON

Create perfect thumbnails
The API now **resizes** images intelligently! Whenever you change the **aspect ratio**, **smart cropping** removes the boring bits.

- Size down images appropriately
- Generally, images shouldn't be larger than 500 KB for fast loading.
- Compress your images with Photoshop or a free tool like tinyjpg/tinypng
- PageSpeed Insights to Check Website Speed

The Technical Stuff...

- **Ensure your page is mobile friendly**
 - <https://search.google.com/test/mobile-friendly>
- **Make sure your website is fast-loading**
 - <https://developers.google.com/speed/pagespeed/insights/>
- **Use short URLs and keep folders to a minimum.**
 - URLs show up in search results. Make sure your URLs are concise, but also include target keywords for pages you're trying to rank for.
- Make sure you're linking to all of the important pages in your website and using appropriate link text

Engagement

Make Content Engaging

Scannable

- Don't write long blocks of text without pause (generally, I try not to have more than 3 lines of text per paragraph)
- Include short bullet-pointed lists
- Include icons, illustrations, photos, and diagrams, as often as possible
- Create lists

Interactive

- Explanation videos or GIFs
- Podcasts
- Quizzes, surveys, and polls
- Relevant infographics or even comics

Anatomy of a Great Blog Post

H1: Page Title

Include your target keyword. Make it make sense to a search engine what the article is about.

When writing blog post content, write for scanability and engagement. Long paragraphs are not ideal. I try to keep text to only 3-4 lines per paragraph. Use bold text to emphasize your main points.

- Use numbered lists and bullet points
- To increase readability
- And break-up or summarize long bits of content

Creating Custom Graphs/Images that contain your target keyword is a great way to rank higher. BUT do not keyword stuff.

The first image on your post should ideally contain the target keyword in the file name AND the alternative text field. For finance, the easiest way to do this is probably with graphs or mini infographics.

Callouts are a great way to make a post more interesting!

If you can, include videos on the topic as well. Often you'd probably want to include video closer to the top for people who would rather watch/listen to the post in video form.

Video can keep people on your blog longer which is great for engagement!

As you write, make sure to include natural related keywords in your post. You can use tools like LSIGraph or UberSuggest to give you ideas.

By writing naturally about a topic, you often do this automatically.

For example, if you're writing advice targeting the keyword **institutional investment**, think and write about topics related to this search. Use keyword tools for ideas.

Examples include:

- Institutional Investment Strategies
- Institutional Investment Definition
- Institutional Investment Management Fees

When it comes to blog post length, there is no hard and fast rule.

What I recommend doing is looking at the top 3 search results ranking for your target keyword on Google and taking their average length and aiming for content that long.

You've probably heard the adage, "No Risk, No Reward." While I suppose there is always some level of risk in anything you do, taking on too much financial risk can lead to unwanted consequences. Foundations and endowments, or really anyone focused on the institutional aspect, must be particularly careful about the amount of risk needed to help their mission become a reality.

I recently reviewed a survey by CAPTRUST of 1504 foundation and endowments with less than \$50 million of investible assets. The survey questioned how much risk the foundation/endowment was willing to take to get their target return. The answer: too much!

The survey showed that most foundations/endowments are taking on more risk than they would like. There was also a personal-related risk as the majority surveyed had only one staff member (full-time or part-time) focusing on investments with most relying on financial institutions for advice. While it's always recommended to leverage an expert when needed, it's important to note that unless they have agreed to assume fiduciary liability (in writing, you are still held liable for the decisions being made. Why is that a concern? Let's take a deeper dive.

You may already be familiar with FIDCO, an organization dedicated to the development of fiduciary best practices. FIDCO uses a four-step process in the Prudent Practices for Investment Stewards (this would be board members, trustees, investment committee members, attorneys, accountants, institutional investors and anyone else who is involved in overseeing investment decision-making). The four-step prudent process is laid out as:

Organize

Formalize

Implement

Monitor

Sounds easy, right? Allow me to further complicate things. Within each step, there are multiple practices. Within those practices, there are multiple responsibilities. Institutional boards have the fiduciary responsibility to fulfill all responsibilities under each practice of each step. Want to guess how many total responsibilities there are? 10? 20? 50? The answer: 160! I can't make this stuff up! If you want the full list, reach out and I'd be happy to review it with you.

Getting back to the topic at hand, how is one board, let alone one person, supposed to manage all these responsibilities on an ongoing basis?

If this is you or someone you know, you may be asking yourself favored questions: What are all these responsibilities that I am supposed to be fulfilling? How am I supposed to manage all of these on an ongoing basis? What happens if I'm not doing all these things? How can I offload some of these responsibilities so I'm not having to do this alone?

You have a choice: you can try to manage all these responsibilities on your own, hope you are doing it correctly and risk personal liability for breaches; you could work with a financial advisory firm (you are still held liable for any breaches that may occur); or you can hire a discretionary trustee to manage the responsibilities for you. When you work with a discretionary trustee, your fiduciary responsibility for your investments is limited to being prudent in hiring and monitoring that trustee.

At Unified Trust, we even make that easy. We take full fiduciary responsibility (in writing) for the first three steps (organize, formalize, and implement) regarding your investments. All that is left for you is to be prudent in hiring and monitoring us and we provide you with a quarterly monitoring report to make that easy.

Feeling that sigh of relief yet?

Board members have an immense amount of responsibility in overseeing the mission and success of the foundation/endowment. Among those responsibilities is knowing and understanding how much risk the foundation is willing to take to achieve the targeted reward. At Unified Trust, our mission is to help build financial futures in the interest of others. We go through a risk tolerance process with each of our clients to make sure they are taking the right amount of risk to achieve their financial goals. We would be honored to serve as your trusted fiduciary so you can focus on your mission at hand and achieve the foundation's financial goals.

Callouts are a great way to make a blog post or webpage more interesting!

They can also be used to highlight main points in the articles.

Video can keep people on your webpages longer which is great for increasing engagement

Authority

What is Authority?

- How trusted is your website's domain?
 - How many websites link to you?
 - Are these websites high authority?
 - How old is your domain?
- Moz.com developed a free tool that will allow you to evaluate your domain authority (<https://moz.com/link-explorer>)
 - Higher = Better
 - Real goal is to be higher than competition. A domain score of 20 can be good or bad depending on who your main competitors are

How to Build Authority

Grow links to your website. This can be done naturally or manually. Be consistent.

- As websites age, they naturally acquire links
- Creating content so great that other sites will link to it on their own over time
- Reaching out directly to other bloggers and third-party websites.
- Target websites who link to your competition. Use a tool like UberSuggest to find them.
- Guest Blogging or Podcasting
- Ads on Trade Magazine Sites/Directories

<https://backlinko.com/link-building-strategies>

Starting Your SEO Strategy

Getting Started with SEO

- **What pages are ranking well right now?**
 - Can you make these pages rank higher by implementing SEO strategies?
- **Do you have thin content or duplicate content?**
 - Can you combine or expand on this content to make it more useful?
- **Conduct keyword research and determine a shortlist of target keywords**
 - Start with a keyword that seems easiest to rank for so you can see results

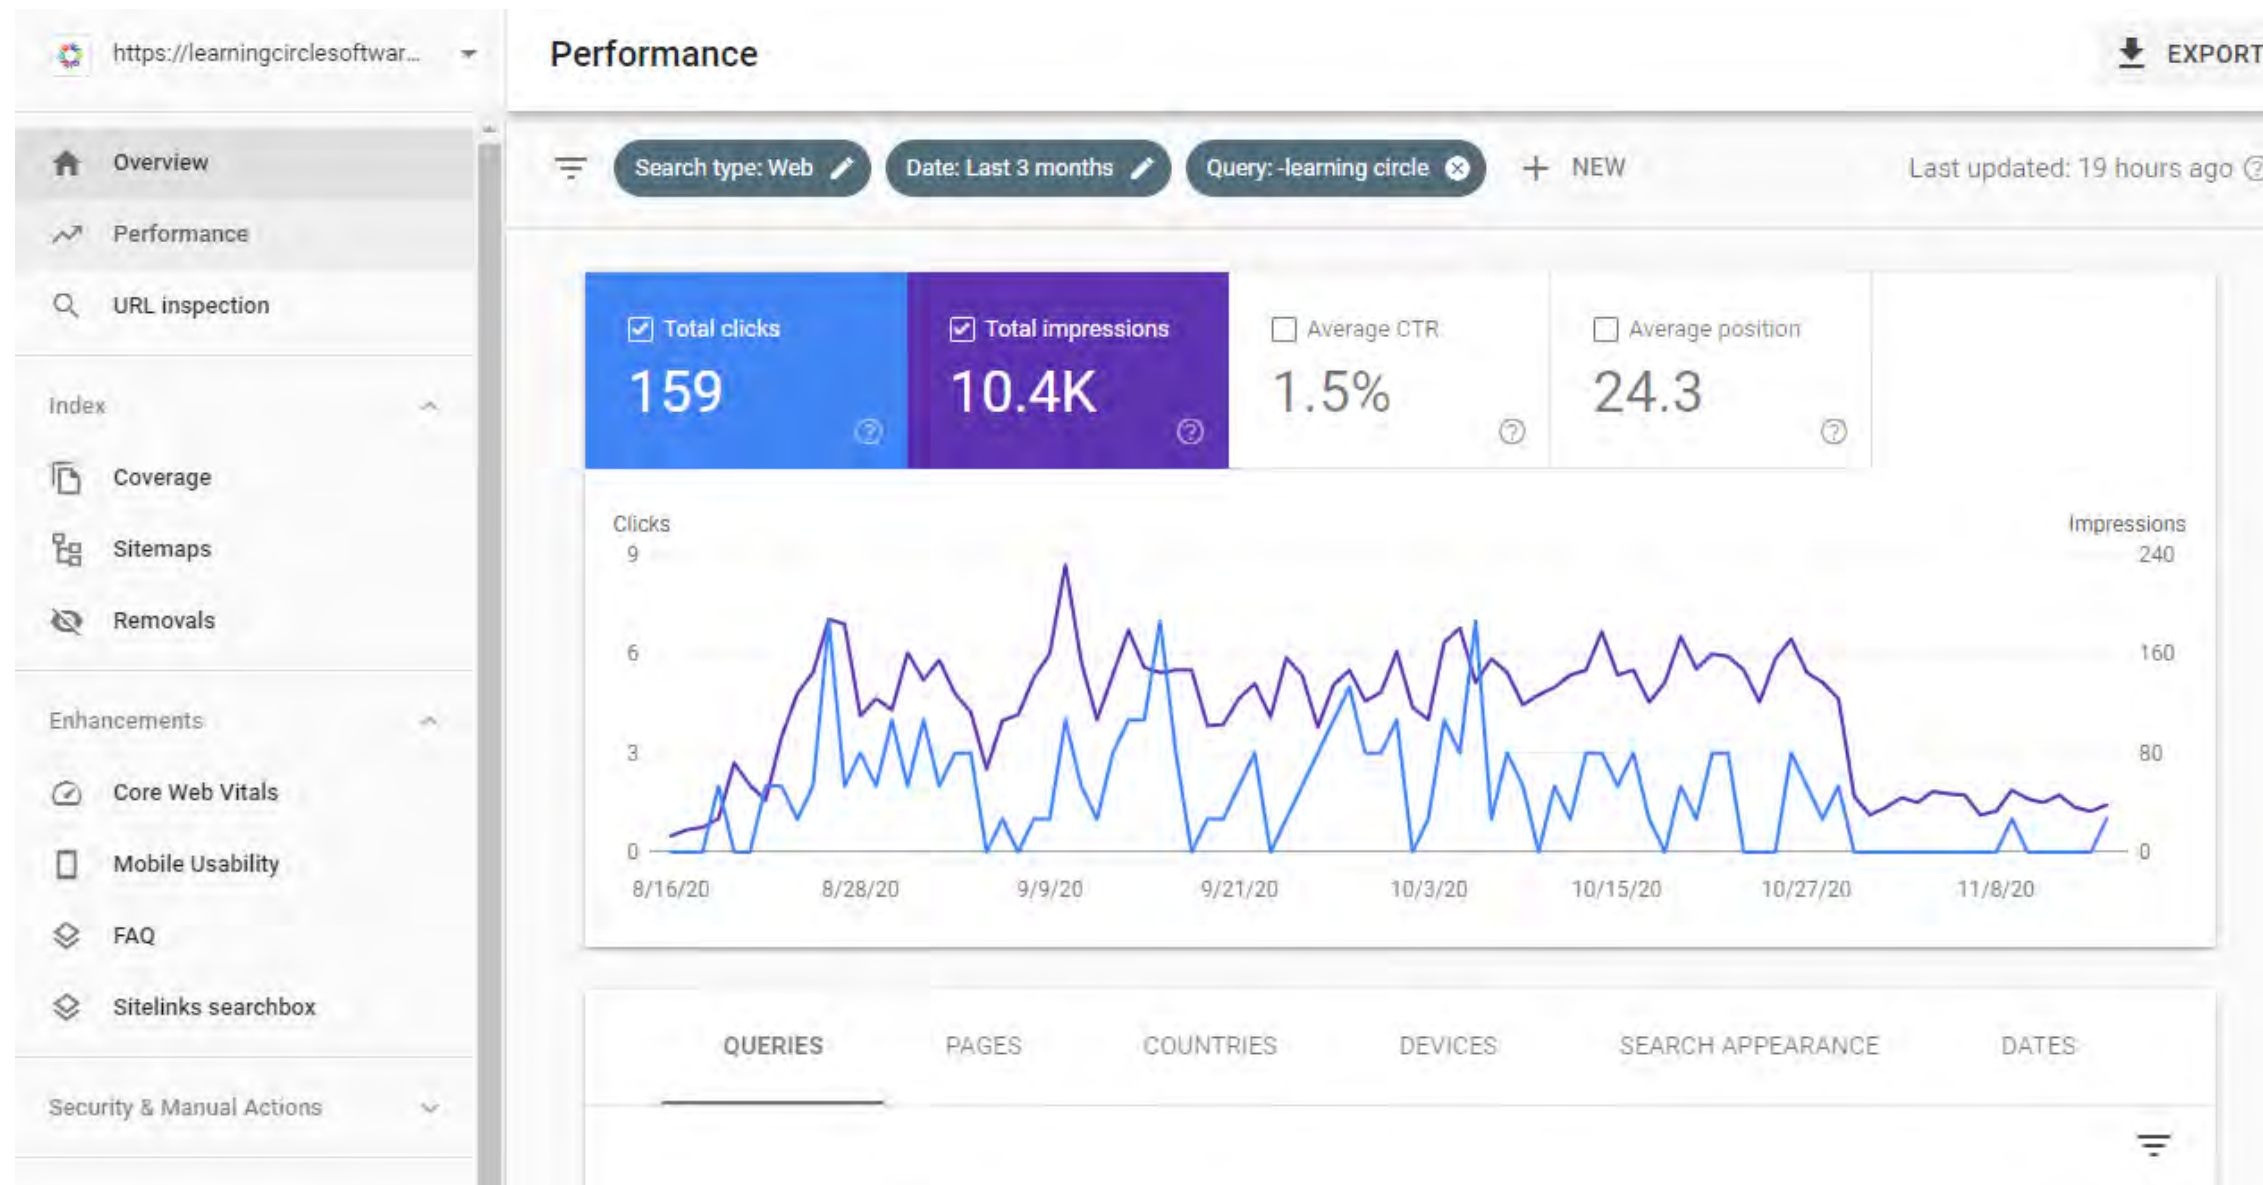

Tracking Metrics

Google Analytics

- **Google Analytics is a great all-around web traffic tool**
- **Most useful for understanding how *everyone* is using your website, for example...**
 - What pages are most popular?
 - What devices and browsers are used to access site?
 - What are most common paths from homepage?
 - Most common exit pages?
 - Best converting pages?
- **But, for analyzing SEO and keywords generating traffic to your site, Google Analytics is not the right tool for the job...**

#1 SEO Metric Tool

Google Search Console
